			ART UNIT 2136	PAPER NUMBER
			MAIL DATE 06/12/2007	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/608,334

Applicant(s)

BAZAN BEJARANO, DARIO

Examiner

Mohammad W. Reza

Art Unit

2136

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 February 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-32 and 49-62 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-32 and 49-62 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 03/26/07.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

1. This is in response to the arguments filed on 02/26/2007.
2. Claims 1-32, and 49-62 are pending in the application.
3. Claims 1-32, and 49-62 have been rejected.

Response to Amendment

4. The examiner approves the amendments made to claim 17, and 49-62.
5. The examiner approves cancellation of claims 33-48.
6. The examiner withdraws the 101 rejection as satisfactory amendment made to the claims.

Response to Arguments

7. Applicant's arguments with respect to claims 1-32, and 49-62 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2136

8. Claims 1-32, and 49-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bathrick et al hereafter Bathrick (US patent 5010572) in view of Marino, Jr. et al hereafter Marino (US Patent 5530758).

9. As per claim 1, Bathrick discloses a method for automatically negotiating a security protocol, comprising: comparing a first protocol set associated with the internal node to a second protocol set associated with the external node; and establishing a secure connection between the external node and the internal node when a matching protocol between the first protocol set and the second protocol set is found (abstract, col. 1, lines 53-67, col. 2, lines 1-32). Although, Bathrick discloses establishing a secure connection between two nodes based on protocol (abstract, col. 1, lines 53-67, col. 2, lines 1-32), he does not explicitly disclose receiving a security authorization request to establish a secure connection between an internal node, the internal node being internal to a security-enabled domain, and an external node, the external node being external to the security-enabled domain. Nevertheless, it is well known in the network security art at the time of invention that a security domain will authorize to establish a connection with other nodes outside of that domain. Exemplary of this is Marino who discloses receiving a security authorization request to establish a secure connection between an internal node, the internal node being internal to a security-enabled domain, and an external node, the external node being external to the security-enabled domain (col. 3, lines 1-67, abstract).

Accordingly, it would been obvious to one of ordinary skill in the network security art at the time of invention was made to have incorporated Marino's teachings of operational

Art Unit: 2136

methods for a secure node in a computer network with the teachings of Bathrick, for the purpose of suitably establishing the connection between two nodes in accordance with their protocol matching (col. 3-4).

10. As per claim 2-5, Bathrick does not disclose a method wherein the external node comprises at least one of a computer and a network-enabled wireless device, wherein the internal node comprises at least one of a client computer and a server, wherein the security-enabled domain comprises a distributed directory domain, wherein the security-enabled domain comprises a certificate-based domain. However, Marino discloses wherein the external node comprises at least one of a computer and a network-enabled wireless device (col. 4, lines 26-67), wherein the internal node comprises at least one of a client computer and a server, wherein the security-enabled domain comprises a distributed directory domain (col. 3, lines 1-67, abstract), wherein the security-enabled domain comprises a certificate-based domain (col. 3, lines 36-67).

The same motivation that was utilized in the combination of claim 1 applies equally as well to claim 2-5.

11. As per claim 6-9, Bathrick does not disclose a method, wherein the certificate-based domain comprises a Kerberos-enabled domain, wherein the matching protocol comprises an X.509 certificate, wherein the security authorization request is generated by the external node, and wherein the step of receiving the security authorization request is executed by the internal node. However, Marino discloses wherein the certificate-based domain comprises a Kerberos-enabled domain, wherein the matching protocol comprises an X.509 certificate (col. 3, lines 36-67), wherein the security

Art Unit: 2136

authorization request is generated by the external node, and wherein the step of receiving the security authorization request is executed by the internal node (col. 3, lines 1-67, abstract).

The same motivation that was utilized in the combination of claim 1 applies equally as well to claim 6-9.

12. As per claim 10-12, Bathrick does not disclose a method wherein the security authorization request is generated by the internal node, wherein the step of receiving the security authorization request is executed by the external node, a step of terminating the secure connection when a session between the external node and the internal node is complete. However, Marino discloses wherein the security authorization request is generated by the internal node, wherein the step of receiving the security authorization request is executed by the external node (col. 3, lines 1-67, abstract), a step of terminating the secure connection when a session between the external node and the internal node is complete (col. 4, lines 26-67)

The same motivation that was utilized in the combination of claim 1 applies equally as well to claim 10-12.

13. As per claim 13-14, Bathrick disclose a method comprising a step of terminating connection processing when no match between the first protocol set and the second protocol set is found, a step of selecting a protocol to use in establishing the secure connection when a plurality of matching protocols are found (abstract, col. 1, lines 53-67, col. 2, lines 1-32).

14. As per claim 15-16, Bathrick does not disclose a method comprising a step of authenticating at least one of the internal node and the external node, wherein the step of authenticating comprises communicating a certificate to a certificate authority.

However, Marino discloses comprising a step of authenticating at least one of the internal node and the external node (col. 3, lines 1-67, abstract), wherein the step of authenticating comprises communicating a certificate to a certificate authority (col. 3, lines 36-67).

The same motivation that was utilized in the combination of claim 1 applies equally as well to claim 15-16.

15. As per claim 17, Bathrick disclose a system for automatically negotiating a security protocol, a node with an associated first protocol set and a second node having an associated second protocol set, comparing the first protocol set associated with the internal node to the second protocol set associated with the external node, and establishing a secure connection between the external node and the internal node when a matching protocol between the first protocol set and the second protocol set is found (abstract, col. 1, lines 53-67, col. 2, lines 1-32). He does not expressly disclose an internal node, the internal node being internal to a security-enabled domain and a negotiation engine, the negotiation engine receiving a security authorization request to establish a secure connection between the internal node and [[the]] an external node being external to the security-enabled domain. However, Marino discloses an internal node, the internal node being internal to a security-enabled domain and a negotiation engine, the negotiation engine receiving a security authorization request to establish a

Art Unit: 2136

secure connection between the internal node and [[the]] an external node being external to the security-enabled domain (col. 3, lines 1-67, abstract).

The same motivation that was utilized in the combination of claim 1 applies equally as well to claim 17.

16. Claims 18-32 are listed all the same elements of claim 2-16 but in a system form rather than a method form. Therefore, the supporting rationales of the rejection to claim 2-16 apply equally as well to claim 18-32.

17. As per claim 49, Bathrick disclose one or more tangible computer-readable media having computer-executable instructions embodied thereon comprising: comparing a first protocol set associated with the internal node to a second protocol set associated with the external node; and establishing a secure connection between the external node and the internal node when a matching protocol between the first protocol set and the second protocol set is found (abstract, col. 1, lines 53-67, col. 2, lines 1-32). He does not expressly disclose receiving a security authorization request to establish a secure connection between an internal node, the internal node being internal to a security-enabled domain, and an external node, the external node being external to the security-enabled domain. However, Marino discloses disclose receiving a security authorization request to establish a secure connection between an internal node, the internal node being internal to a security-enabled domain, and an external node, the external node being external to the security-enabled domain (col. 3, lines 1-67, abstract).

Art Unit: 2136

The same motivation that was utilized in the combination of claim 1 applies equally as well to claim 49.

18. Claims 50-62 are listed all the same elements of claim 2-16 but in a computer readable medium form rather than a method form. Therefore, the supporting rationales of the rejection to claim 2-16 apply equally as well to claim 50-62.

Conclusion

19. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad w. Reza whose telephone number is 571-272-6590. The examiner can normally be reached on M-F (9:00-5:00).

Art Unit: 2136

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **MOAZZAMI NASSER G** can be reached on (571)272-4195. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
